Barbara Entwisle, Vice-Chancellor for Research and the Kenan Distinguished Professor in the Department of Sociology at the University of North Carolina at Chapel Hill, is a social demographer interested in population and social change. As vice chancellor, Dr. Entwisle leads a campus-wide research program that attracted $788 million in contract and grant funding in fiscal 2011. She oversees the research support, compliance, communication, and technology transfer offices as well as a portfolio of 16 pan-university interdisciplinary research centers and institutes, including the Carolina Population Center, which she directed from 2002 to 2010. As a faculty member, Dr. Entwisle studies the social context of demographic behavior, focusing on the physical as well as the social environment. Her current research is divided into two sets of projects. In one, based in Northeast Thailand, she is investigating demographic responses to rapid social change, migration and social networks, and the interrelationships between population and environment. In the other set, she is directing North Carolina components of the National Children’s Study, a large longitudinal study of how social, behavioral, community, and environmental factors affect human health and development. Dr. Entwisle is past President of the Population Association of America and a former editor of Demography. She was elected Fellow of the American Association for the Advancement of Science in 2003 and named Mary Lily Kenan Flagler Bingham Distinguished Professor in 2007.

Entwisle's undergraduate work was completed at Swarthmore College; she received her A.M. and a Ph.D. in Sociology from Brown University. She was a Postdoctoral Fellow in Economic Demography at the University of Michigan in Ann Arbor.
