Seth Sanders specializes in the fields of economic demography and public policy. His research focuses specifically on five different lines of study, which include the trends of race and gender in relation to earnings; the effects of extreme economic changes on workers and families; the performance of gay and lesbian families within the economy; the economic consequences of teenage childbearing; and the role of immigration and migration in economic success and health outcomes. He has received numerous grants for his research, including several from the National Institute of Child Health and Development, and also from the National Science Foundation and the Appalachian Regional Commission. He has published his research writings extensively, contributing his work to numerous leading academic journals for over two decades. Some of his refereed articles include, “Gender Wage Differences Among the Highly Educated” with D. Black, A. Haviland, and L. Taylor; “The Economics of Lesbian and Gay Families” with D. Black and L. Taylor; “Empirical Regularities Across Cultures: The Effect of Children on Women’s Work” with H.O. Duleep; and “A Simulation Estimator for Sequential Models of Discrete Choice” with V.J. Hotz, R. Miller, and J. Smith. Professor Sanders is currently conducting research funded by a grant awarded by the National Institute of Child Health and Development on, “The Role of Firms in Immigrant Assimilation and Labor Market Adjustment” and a second project on “The Great Migration and Economic and Health Outcomes in the African American Community.”
